V. Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

1. Statement

Novelty (N)	Claims	1-12	YES
	Claims		NO
Inventive step (IS)	Claims	1-12	YES
	Claims		NO
Industrial applicability (IA)	Claims	1-12	YES
	Claims		NO

2. Citations and explanations

1. None of the cited documents anticipates all the features of the current independent claims, claims 1 and 8, in so far as said claims can be understood, despite a lack of clarity, with the support of the description. The subject matter of claims 1 and 8 can consequently be considered novel if, consequent upon appropriate amendments (see Box VIII), the application also satisfies the requirements of PCT Article 6.

No objection is raised in respect of industrial applicability.

2. The present application relates to a protective polymer layer for a layer of a luminous material. In order to achieve mechanical resistance and resistance to humidity, said protective polymer layer is in part hardened and in part not hardened. Problems associated with a multi-layer construction can be precluded by the fact that this protective layer constructed as a single layer is made of polymer. None of the available documents suggests a multifunctional protective layer of this type.

3. Dependent claims 2-7 and 9-12 refer back to independent claims 1 and 8, respectively, and satisfy the requirements relating to such claims.

VIII. Certain observations on the international application

The following observations on the clarity of the claims, description, and drawings or on the question whether the claims are fully supported by the description, are made:

Contrary to the requirements, it is not clear from the independent claims that said claims concern a "protective layer made of a polymer and constructed as a single layer" (see description, page 5, lines 20-22; page 6, lines 23-26). Thus, the present claims 1 and 8 fail to satisfy the requirements of PCT Article 6. Furthermore, clarification is required in order to conclusively distinguish each of the claimed subjects from the multilayer construction of the prior art.
